EDUCATION

Hong Kong University of Science and Technology

Hong Kong, China

BEng Computer Engineering, Extended Major in AI, Minor in Big Data Technology Sep 2024 – Jul 2028 (Expected)

EXPERIENCE

AI Digital Marketing Assistant Intern

Jun 2026 – Aug 2026

Tech Vision System Ltd.

San Po Kong, Hong Kong

- Designed and built an end-to-end, multi-user HR attendance platform (Python, Streamlit, SQLite) integrating WeCom, Azure AD/Outlook, Google Maps Geocoding, and JDC APIs to automatically classify attendance and generate compliance reports; reported directly to the Head of HR and CEO, and took full ownership after initial co-development
- Drove a live sales analytics dashboard (Streamlit, Pipedrive REST API) from v13 to v15.4.0, building the core data-fetching/summarization engine, role-based authentication, and inline write-back editing now used daily by the Sales, Sales Admin, and JDC teams
- Directed a ground-up rewrite of a legacy 1,600-line Selenium automation script into a modular, API-integrated contract-sync tool connecting JDC and Pipedrive, diagnosing integration failures against live production APIs and resolving field-validation and packaging bugs

Large Language Model Product R&D Intern

Jul 2025 – Aug 2025

SenseTime

Beijing, China

- Fine-tuned an LLM API model to automate definition summarization and vocabulary review for a production dictionary app
- Built AI WordTrim, an internal tool converting long Chinese dictionary definitions into concise, keyword-style explanations, cutting manual editing time
- Audited 14,000 AI-generated vocabulary entries, images, and pronunciation audio clips for semantic accuracy and age-appropriateness
- Proposed adding full IPA coverage to the audio-generation pipeline; recommendation adopted by the development team, improving pronunciation accuracy

PROJECTS

Debate AI — Multi-Agent Debate Practice Tool

Aug 2026 – Present

Python, Streamlit, CrewAI, LangGraph, Pydantic AI, SenseTime Nova API

- Building an AI debate-practice tool with multiple practice modes, each built on a different agent framework (CrewAI for role-based task delegation, LangGraph for stateful multi-agent workflows, Pydantic AI for type-safe, schema-validated outputs) to compare orchestration approaches
- Cut full-debate-simulation runtime from 6 minutes to 3.5 minutes by refactoring from blocking generation to streaming each agent's speech as it completes; evaluating asyncio for further pipeline parallelization

Digital Twin — AI Resume Assistant

Jul 2026

Python, Gradio, DeepSeek API, EmailJS

- Built and deployed a conversational LLM agent (DeepSeek API) on Hugging Face Spaces, based on Ed Donner's Agentic AI course (Udemy), that answers visitor questions about my background in real time
- Engineered a dual-notification pipeline via EmailJS, replacing a single-user Pushover integration, so both visitor and owner are notified per conversation

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, MIPS Assembly, HTML/CSS, L^AT_EX

AI/ML: : LLM API Integration (OpenAI, DeepSeek, SenseTime Nova), Multi-Agent Orchestration (CrewAI, LangGraph, Pydantic AI), Prompt Engineering, Agentic Workflows

Backend & Data: REST API Integration, SQLite, Pandas, PyInstaller (packaging & distribution)

Libraries: pandas, NumPy, Matplotlib, Pytorch, OpenCV, Streamlit, Gradio

Tools: Git, VS Code, IntelliJ IDEA, Streamlit, Gradio, Jupyter Notebook, Figma, Notion

ADDITIONAL INFORMATION

Languages: Native Cantonese; Fluent English and Mandarin — Authorized to work in Hong Kong SAR
